## Efficacy Effect

Are you still leaving swelling and external marks untreated?

Menadione ingredient contained in Vitamin K cream helps with blood circulation improvement and swelling reduction.

**After-care** for irritated skin.

---

## Efficacy Effect

# Don't leave bluish external marks untreated.

Bruising is caused by subcutaneous bleeding from damage to small blood vessels under the skin. If left untreated, pigmentation can occur as the blood is absorbed or it may develop into a hematoma.

Patch test for skin irritation	*Refer to notes	<b>0.00</b>	<b>Non-irritant</b>

Test participants had their skin wiped with 70% ethanol, dried, and then the test product was loaded into a Finn Chamber<sup>®</sup> and attached to the skin for 24 hours. After removing the patch 30 minutes and 24 hours later, dermatologists assessed whether there was any skin irritation.

## Efficacy Effect

Did you get a procedure to look prettier?  
**Even small needle marks shouldn't be ignored!**

When a needle is inserted into the skin, it causes temporary trauma to the skin.

This damages the skin tissue and causes an inflammatory response. As surrounding blood vessels expand during this process, red marks or swelling may appear.
